

AG Capital is a global macro investment firm, trading across currency, commodity, interest rate, and equity index futures. The firm employs a fundamental, discretionary strategy, with an investment outlook of one month to several years. The strategy concentrates capital in a small number of core themes, complemented by shorter-term, contrarian trades.

- Fundamental analysis used to determine directional exposure
- . Risk management informed by technical analysis; position-sizing based on market volatility and correlations
- . Concentrated portfolio of 3 8 themes, with trades held for weeks to several months

Returns are net of fees and brokerage commissions and represent the composite performance of individual managed accounts (and not a fund or pool). S&P 500 Total Return Index assumes dividends are reinvested. The SG CTA Index is an equal-weighted composite of the largest 20 (by AUM) CTA managers open for investment. The Index is not investable and represents the performance of only those large funds that report to the Societe Generale database and not the entire universe of hedge funds.
